

Car Bike Port

1 car space = 10 bicycles

The bold outline of a car conveys a serious message in a humorous way. Cars cause pollution, congestion and take up lots of space. One car parking space can provide parking for 10 bicycles. The message is, 'ditch the car and start cycling!'

Each unit fits into a standard parking space conveying the message that bicycles are more space efficient than cars. It also acts as a barrier to protect parked bicycles from cars.

This product has been installed across the UK and in major cities worldwide and has been popular for both on-street parking and temporary parking at events.
